TORRE Bioethanol Lamp

USER MANUAL

Edition 1.2 | 11 October 2026
masuriawild.com

1. INTRODUCTION

Thank you for choosing TORRE by Masuria Wild. Read this entire manual before installation and first use. Keep it and pass it to subsequent users. Do not operate a damaged or incomplete lamp.

2. INTENDED USE

TORRE is a freestanding decorative lamp with a real flame, for outdoor use only. The steel body extends into four metal legs with levelling feet. No electrical connection is required. Do not use the lamp for cooking or indoors.

3. WARNING SYMBOLS

WARNING!

The warning triangle indicates a risk of fire, burns or injury. Follow the associated instructions before carrying out the task.

4. SAFETY

- Only an adult may operate the lamp. Never leave the flame unattended. Keep children and pets away.
- Place the lamp on a firm, level, stable, non-combustible surface. All four feet must be supported. Do not place it on unstable rocks, steps or in a walkway.
- Stay at least 1 m from the lamp while it is burning. Keep combustible materials and the fuel packaging at least 1 m away. Keep branches, fabric and other combustible objects clear of the area above the flame.
- Use only bioethanol gel suitable for this burner. Never use liquid bioethanol, petrol, firelighters or other fuels. Do not mix fuels.
- Fill the cold container to the MAX mark, with no more than 200 ml. If the mark is missing, measure out no more than 200 ml. Never overfill.
- Never add fuel to a burning or hot burner. The burner may remain hot for an hour after extinguishing; elapsed time does not replace complete cooling.
- Before lighting, remove spilled fuel and check that the container does not leak. Close the fuel packaging and move it to a safe place.
- Use a long lighter or a long fireplace match. Keep hands and face clear of the flame.
- Do not touch hot glass, burner, body or snuffer. Wear heat-protective gloves when using the snuffer.
- Do not move a burning or hot lamp. Do not operate continuously for more than 6 hours without allowing it to cool completely.
- Do not use in strong wind, rain or conditions that could cause the lamp to tip over. Protect hot glass from water and sudden temperature changes.
- Do not cover ventilation holes. Never use cracked glass or a leaking container. Do not modify the burner or structure.
- Never extinguish with water. Use the supplied snuffer as described. Keep suitable fire-extinguishing equipment nearby and observe local fire-safety rules.

5. COMPONENTS

EN

Fig. 1. TORRE reference view with component labels. This illustration is not a manufacturing drawing. Black finish shown as an example.

Overall dimensions: width 37 cm, depth 37 cm, height 129 cm.

6. TECHNICAL DATA

Model / brand	TORRE / Masuria Wild
W × D × H	37 × 37 × 129 cm
Body and legs	Steel; metal legs with levelling feet
Burner / cylinder	Stainless steel / heat-resistant glass
Fuel	Bioethanol gel suitable for this burner
Maximum fill	Up to MAX; never more than 200 ml
Use	Outdoors only
Electrical supply	Not required
Finishes	Black, Corten, Forest Haze, Terra Brown, Ivory Frost

Positioning and checks before use

1. Unpack all components and remove packaging materials. Inspect the body, glass, fuel container, burner housing and snuffer.
2. The legs are an integral part of the body. Do not attempt to detach them.
3. Position the lamp where it will be used. Adjust the feet until all four contact the surface and the lamp is upright and does not rock. Do not unscrew the feet out of the legs.
4. Check that the fuel container and burner housing are correctly seated. Place the cold cylinder in its seat. If a component does not fit or the lamp is unstable, stop and contact the service team.

EN

7. OPERATION

Filling and lighting

MAX = 200 ml. Both limits apply: do not exceed the mark or 200 ml. Fill only a completely cold burner.

1. Make sure the entire lamp is cold, no flame remains and the container does not leak. Remove the cold glass cylinder and put it somewhere safe.
2. Fill the container with bioethanol gel up to MAX, never exceeding 200 ml. Without a MAX mark, measure out a maximum of 200 ml. Include any remaining fuel in this limit.
3. Remove all spilled fuel. Close the packaging and move it at least 1 m away. Do not light the lamp if fuel is present outside the container.
4. Ignite the gel with a long lighter or fireplace match. Take particular care and do not lean your face over the burner.
5. Carefully place the cold glass cylinder in its seat, keeping your hands clear of the flame. Do not reach through the flame. If this cannot be done safely, stop and contact the service team.
6. Step back at least 1 m. The flame settles after approximately 10 minutes. Supervise the lamp throughout use.

WARNING!

Never add fuel to a burning or hot burner. The burner may remain hot for an hour after extinguishing; elapsed time does not replace complete cooling.

7. EXTINGUISHING, COOLING AND REFILLING

1. You may allow the supervised flame to go out naturally when the gel is consumed.
2. To extinguish sooner, use the supplied snuffer. Wearing heat-protective gloves, place it over the top opening of the cylinder to cut off the airflow. Do not remove hot glass and do not use water.
3. Check that the flame is out. Do not touch the hot snuffer, glass or burner.
4. Allow the entire lamp to cool completely. The burner may remain hot for an hour. Do not judge safety from elapsed time alone.
5. Only when fully cold, remove the snuffer and cylinder, inspect the container and repeat the filling procedure. Never add fuel to sustain the flame.

If something is wrong

- Unstable lamp: extinguish, allow complete cooling, then correct the supporting surface and levelling.
- Cracked glass, leakage or a deformed component: stop using the lamp and contact the seller. Use only parts intended for TORRE.
- Unusual flame: extinguish, allow cooling and check the fuel type, gel quantity and unobstructed ventilation holes. Never repair a burner while it is in use.

WARNING!

Do not move a burning or hot lamp. Do not operate continuously for more than 6 hours without allowing it to cool completely.

8. CLEANING AND MAINTENANCE

- Carry out all cleaning and maintenance only when the lamp is completely cold. Regularly inspect the glass, container, body and feet.
- Clean coated surfaces with a soft cloth or brush, water and mild detergent. Dry afterwards. Do not use corrosive cleaners or abrasives.
- Clean the cold cylinder with a glass-cleaning product. Never pour cold water onto hot glass. Dry all components before use.
- Gently clean fuel residue from the cold burner and snuffer according to the gel manufacturer's instructions. Do not flood the burner or damage its surfaces or holes.
- Corten: gently remove loose patina with a soft brush. Natural patina changes colour; runoff and residue can stain surrounding surfaces. Choose a suitable, stain-resistant surface.
- Store the extinguished, cold and dry lamp where it is protected from damage and moisture. Never cover a warm lamp.

9. SERVICE AND WARRANTY

For parts, faults and warranty terms, contact the seller or Masuria Wild via masuriawild.com. Provide the TORRE model name, finish, purchase date and a description of the issue. Keep your proof of purchase.

10. DISPOSAL

Separate packaging materials. Take metal and glass to the appropriate local collection point. Dispose of remaining gel and its packaging according to the fuel label and local rules. Never pour fuel into drains or onto the ground.
